

WHAT IS GEN AI?

1. Write a short paragraph in your own words explaining what Generative AI (GenAI) is, and give two real-world examples of GenAI applications you have seen or used (such as ChatGPT, DALL-E, or Instagram filters).

Ans. Generative AI (GenAI) is a type of artificial intelligence that can create new content such as text, images, music, videos, or code by learning patterns from large amounts of data. Unlike traditional AI, which mainly analyzes data and makes predictions, Generative AI can produce original outputs that resemble human-created content.

Two real-world examples of Generative AI applications are:

1. ChatGPT – It can generate human-like responses, write essays, answer questions, and assist with coding.
2. DALL-E – It can create unique images from text descriptions provided by users.

2. Create a table comparing GenAI with traditional AI by listing at least three key differences in how they work and the types of outputs they produce.

Ans.

Aspect	Traditional AI	Generative AI
Main Purpose	Analyze data and make predictions	Create new content from learned patterns
Data Processing	Uses data to classify or predict outcomes	Uses data to generate text, images, audio, or code
Creativity	Limited creativity	Can produce creative and original outputs
Output Format	Fixed outputs such as labels, scores, or predictions	New content such as stories, images, music, or code
Example	Spam email detection	Text generation using ChatGPT

3. List 5 popular apps or features you use daily (like Instagram Reels, Spotify recommendations, Zomato chatbots, YouTube video summaries, or Flipkart product images) and identify which ones likely use GenAI. For each, briefly explain how GenAI might be working behind the scenes.

App/Feature: Instagram Reels Effects

Uses GenAI?: Yes

How GenAI Might Be Working: AI-generated filters and effects modify images and videos in real time.

App/Feature: Spotify AI Playlist

Uses GenAI?: Yes

How GenAI Might Be Working: Generates personalized playlists and descriptions based on user preferences.

App/Feature: Zomato Chat Support

Uses GenAI?: Yes

How GenAI Might Be Working: AI chatbot generates responses to customer queries.

App/Feature: YouTube Video Summaries

Uses GenAI?: Yes

How GenAI Might Be Working: AI creates short summaries of long videos automatically.

App/Feature: Flipkart Product Images & Descriptions

Uses GenAI?: Yes

How GenAI Might Be Working: AI can generate product descriptions and enhance product images.

4. Use ChatGPT or any GenAI tool to generate a short poem (4-6 lines) about your favorite food app (Zomato, Swiggy, etc.), then paste the output and describe in 2-3 lines how the tool created something new rather than just retrieving existing text.

Ans. Prompt Used

"Write a short 5-line poem about Zomato and food delivery."

Output Received

Zomato brings flavors to my door,
Tasty meals and so much more.
From spicy snacks to sweets divine,
Every order arrives right on time.
Making food moments truly shine.

How GenAI Created New Content

The Generative AI model did not copy this poem from an existing source. Instead, it learned patterns of language from large datasets and generated new lines based on the prompt. The poem is an original combination of words and ideas created specifically for the request, demonstrating the creative content-generation capability of GenAI.
