

GEN AI ASSIGNMENT

SESSION – 1

1. List 3 apps you use daily (like Instagram, Zomato, Spotify) and describe one feature in each that could be powered by a generative AI model instead of traditional rule-based logic.

Ans.

APP	FEATURE	HOW AI CAN IMPROVE IT
instagram	Caption Suggestions	Generative AI can automatically create creative captions, hashtags, and post descriptions based on the uploaded image.
Zomato	Food recommandatio ns	AI can generate personalized meal suggestions and explain why a user might like a particular dish based on previous orders.
Spotify	Playlist creation	AI can create custom playlists based on mood, weather, activities, or user preferences and provide descriptions for each playlist.

2. Create a table comparing discriminative models and generative models across at least 4 aspects (definition, main use, example task, example model name).

Ans.

ASPECT	DISCRIMINATIVE	GENERATIVE MODELS
--------	----------------	-------------------

	MODELS	
definition	Learn the relationship between input data and labels.	Learn the underlying distribution of data and can generate new data.
Main use	Classification and prediction tasks.	Data generation, content creation and simulation
Example task	Predict whether an email is spam or not.	Generate a new email
Example model name	Logistic regression, SVM, random forest	GAN, GPT, VAE
Output	Predicts labels or categories.	Generate new text, images and videos.

3. Use ChatGPT to generate a short product description for a new Flipkart gadget (make up the gadget). Copy the prompt you used and the output you received.

ANS. Prompt Used

"Create a professional product description for a new Flipkart gadget called SmartNote AI Pen. The pen can convert handwritten notes into digital text, summarize notes using AI, translate notes into multiple languages, and sync with smartphones. Write a description of around 120 words highlighting its key features and benefits."

Output Received

SmartNote AI Pen – Write Smarter, Learn Faster

Introducing the SmartNote AI Pen, your intelligent writing companion designed for students and professionals. This innovative pen instantly converts handwritten notes into editable digital text, ensuring that your important ideas are never lost. Powered by advanced AI, it can automatically summarize lengthy notes into concise key points, helping users save time and improve productivity. The SmartNote AI Pen also supports real-time translation into multiple languages, making communication easier than ever. With seamless smartphone synchronization, your notes are securely stored and accessible anytime, anywhere. Whether you're attending lectures, meetings, or brainstorming sessions, SmartNote AI Pen transforms traditional note-taking into a smart and efficient experience.

4. Pick one generative AI application (text generation, image synthesis, music/audio generation, or code generation) and describe a new feature you would add to an app you use, explaining how generative AI would power it.

Application Chosen: Text Generation

App: WhatsApp

Feature Name: AI Conversation Assistant

Description:

I would add an AI Conversation Assistant to WhatsApp. This feature would help users draft messages based on the context of the conversation. For example, if a user wants to send a professional

reply, birthday wish, apology, or meeting request, the AI can generate an appropriate message instantly.

The generative AI model would analyze the conversation context and create personalized responses in different tones such as formal, friendly, or professional. This would save time, improve communication, and help users write better messages. The feature could also summarize long chats and suggest follow-up actions automatically.

Role of Generative AI:

A large language model (LLM) would generate human-like text responses, summaries, and message suggestions based on the conversation context.
